Application/Control Number: 10/825,486

Art Unit: 2871

Applicant's election without traverse of Species A (claims 1-34, 63-76 and 83-102) in the reply filed on 04/10/06 is acknowledged.

Claims 35-62, 77-82 and 103-114 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 04/10/06.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9, 11-21, 23-32, 34, 83-89 and 91 are provisionally rejected under 35 U.S.C. 102(e) as being anticipated by copending Application No. 10/824,612 (US 2005/0128406) which has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the copending application, it would constitute prior art under 35 U.S.C. 102(e), if published under 35 U.S.C. 122(b) or patented. This provisional rejection under 35 U.S.C. 102(e) is based upon a presumption of future publication or patenting of the copending application.

Note Fig. 4 of the copending application, which identically discloses the claimed array substrate. It is noted that Fig. 5 of the instant application and Fig. 4 of the copending application'612 are *identical*. As to method claims, the method of the

Application/Control Number: 10/825,486

Art Unit: 2871

copending application'612 should be the same as that of the instant application because the two devices are *identical*. See discussions of the recited features in the text (paragraphs 0033 – 0039 of US 2005/0128406).

This provisional rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the copending application was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131. This rejection may not be overcome by the filing of a terminal disclaimer. See *In re Bartfeld*, 925 F.2d 1450, 17 USPQ2d 1885 (Fed. Cir. 1991).

Applicant cannot rely upon the foreign priority papers to overcome this rejection because a translation of said papers has not been made of record in accordance with 37 CFR 1.55. See MPEP § 201.15.

Claims 10, 22, 33 and 90 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 63-76 and 92-102 are allowed over the prior art of record because none of the prior art discloses or suggests an array substrate and a method having structure and steps similar to those of claims 1, 13, 24 and 83 *in combination* with the feature "a semiconductor line under the data line and having the same pattern shape as the data line" or the feature "a passivation layer over the thin capacitor and pixel electrodes, the passivation layer having first and second contact holes that expose the common line and pixel connecting line, respectively".

Application/Control Number: 10/825,486 Page 4

Art Unit: 2871

Claims 10, 22, 33 and 90 are allowed over the prior art of record because none of the prior art discloses or suggests an array substrate and a method having structure and steps similar to those of claims 9, 21, 32 and 89 *in combination* with the feature "wherein the capacitor electrode overlaps a previous gate line of a previous neighboring pixel region to form a second storage capacitor".

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hirakata et al disclose an IPS –LCD device having spiral pixel electrode and spiral common electrode.

Any inquiry concerning this communication should be directed to Tai Duong at telephone number (571) 272-2291.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
